

Keith Coker, Chief Technology Officer

Keith Coker has served in the planning and engineering capacity at NuVox for 8 years, developing the network strategy that has kept NuVox at the forefront of technology. Keith is currently leading NuVox further into carrier-class VoIP services and extending the products that are available across NuVox's IP-centric network.

Before joining NuVox, Keith managed carrier services for Knology, which was one of the first companies providing voice, video, and data services over a hybrid fiber coax plant. Prior to Knology, Keith oversaw fixed network planning for Powertel, a PCS wireless company that grew from a startup to over 1 million subscribers during his tenure. Before Keith's work in wireless and cable, he began his career working on a myriad of projects for longhaul fiber provider Interstate Fibernet.

Education

Bachelor of Science in Electrical Engineering, Auburn University; graduated cum laude

Master of Science in Electrical and Optical Engineering; University of Arizona
